

# Cree® XLamp® CXA2530 LED

#### PRODUCT DESCRIPTION

The XLamp CXA2530 LED array expands Cree's family of high-flux, multi-die arrays, offering high performance in an easy-to-use platform. With XLamp lighting-class reliability, the CXA2530's uniform emitting surface enables both directional and non-directional lighting applications and luminaire designs. Available in 2-step and 4-step color consistency, featuring a 19-mm optical source, the CXA2530 brings new levels of flux and efficacy to this form factor.

The CXA LED Design Guide provides basic information on the requirements to use the CXA2530 LED successfully luminaire designs.1

# **OPERATING LIMITS**

The maximum current rating of the CXA2530 is dependent on the case temperature (Tc) when the LED has reached thermal equilibrium under steady-state operation. Please refer to the Mechanical Dimensions section on page 14 for the location of the Tc measurement point.

# RELATIVE SPECTRAL POWER DISTRIBUTION ( $I_F = 800 \text{ mA}, T_J = 85 \text{ °C}$ )

The following graph is the result of a series of pulsed measurements at 800 mA and  $T_1 = 85$  °C.

# **ELECTRICAL CHARACTERISTICS**

The following graph is the result of a series of steady-state measurements.

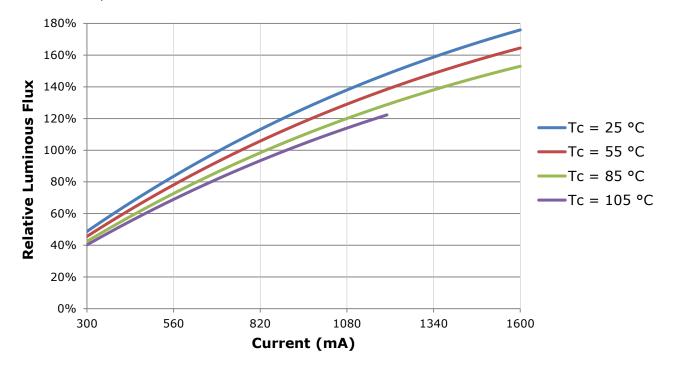

# RELATIVE LUMINOUS FLUX VS. CURRENT (T<sub>J</sub> = 85 °C)

The relative luminous flux values provided below are the ratio of:

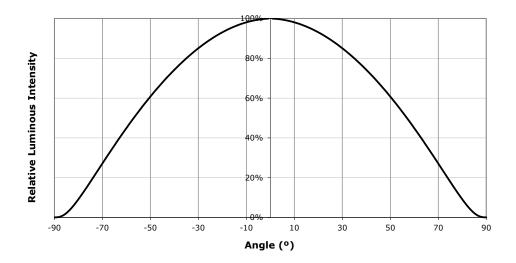

- Measurements of CXA2530 at steady-state operation at the given conditions, divided by
- Flux measured during binning, which is a pulsed measurement at 800 mA at  $T_1 = 85$  °C.

For example, at steady-state operation of Tc = 85 °C,  $I_F$  = 1080 mA, the relative luminous flux ratio is 120% in the chart below. A CXA2530 LED that measures 3200 lm during binning will deliver 3840 lm (3200 \* 1.2) at steady-state operation of Tc = 85 °C,  $I_F$  = 1080 mA.

#### THERMAL DESIGN

The CXA family of LED arrays can include over a hundred different LED die inside one package, and thus over a hundred different junction temperatures  $(T_j)$ . Cree has intentionally removed junction-temperature-based operating limits and replaced the commonplace maximum  $T_j$  calculations with maximum ratings based on forward current  $(I_F)$  and case temperature (Tc). No additional calculations are required to ensure the CXA LED is being operated within its designed limits. Please refer to page 2 for the Operating Limit specification.

Cree has measured the temperature at the bottom of the package, commonly referred to as the solder point  $(T_{SP})$ , and found this value to be equivalent to the temperature at the Tc location at the top of the package once the LED has reached thermal equilibrium. There is no need to calculate for  $T_J$  inside the package, as the thermal management design process, specifically from  $T_{SP}$  to ambient  $(T_a)$ , remains identical to any other LED component. For more information on thermal management of Cree XLamp LEDs, please refer to the XLamp Thermal Management application note at www.cree.com/xlamp\_app\_notes/thermal\_management. For CXA soldering recommendations and more information on thermal interface materials (TIM) and connection methods, please refer to the Cree XLamp CXA Family LEDs soldering and handling document at www.cree.com/xlamp\_app\_notes/CXA\_SH.

To keep the CXA2530 LED at or below the maximum rated Tc, the case to ambient temperature thermal resistance (R\_c-a) must be at or below the maximum R\_c-a value shown on the following graph, depending on the operating environment. The y-axis in the graph is a base 10 logarithmic scale.

As the figure at right shows, the  $R_c$ -a value is the sum of the thermal resistance of the TIM ( $R_t$ ) plus the thermal resistance of the heat sink ( $R_t$ ).

#### **NOTES**

## **Lumen Maintenance Projections**

Cree now uses standardized IES LM-80-08 and TM-21-11 methods for collecting long-term data and extrapolating LED lumen maintenance. For information on the specific LM-80 data sets available for this LED, refer to the public LM-80 results document at www.cree.com/xlamp app notes/LM80 results.

Please read the XLamp Long-Term Lumen Maintenance application note at www.cree.com/xlamp\_app\_notes/lumen\_maintenance for more details on Cree's lumen maintenance testing and forecasting. Please read the XLamp Thermal Management application note at www.cree.com/xlamp\_app\_notes/thermal\_management for details on how thermal design, ambient temperature, and drive current affect the LED junction temperature.

## **RoHS Compliance**

The levels of RoHS restricted materials in this product are below the maximum concentration values (also referred to as the threshold limits) permitted for such substances, or are used in an exempted application, in accordance with EU Directive 2011/65/EC (RoHS2), as implemented January 2, 2013. RoHS Declarations for this product can be obtained from your Cree representative or from the Product Documentation sections of www.cree.com.

# **REACh Compliance**

REACh substances of high concern (SVHCs) information is available for this product. Since the European Chemical Agency (ECHA) has published notice of their intent to frequently revise the SVHC listing for the foreseeable future, please contact a Cree representative to insure you get the most up-to-date REACh SVHC Declaration. REACh banned substance information (REACh Article 67) is also available upon request.

#### **UL Recognized Component**

Level 4 enclosure consideration. The LED package or a portion thereof has been investigated as a fire and electrical enclosure per ANSI/UL 8750.

# **Vision Advisory Claim**

Users should be cautioned not to stare at the light of this LED product. The bright light can damage the eye.

#### **PACKAGING**

Cree CXA2530 LEDs are packaged in trays of 20. Five trays are sealed in an anti-static bag and placed inside a carton, for a total of 100 LEDs per carton. Each carton contains 100 LEDs from the same performance bin.
